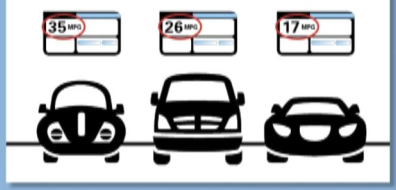
EPA's Fuel Economy & Environment Label

Buying a vehicle? Want to compare fuel economy?



Use the Fuel Economy Label.

Use the Fuel Economy (MPG) values on this window sticker or go to fueleconomy.gov

Why should I rely on the label values?

Label values are based on tests that reflect real-world driving conditions for the average U.S. driver:

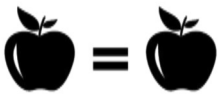
1. City Driving
2. Highway Driving
3. Cold Weather
4. Air Conditioning
5. Fast Acceleration & High Speed

These provide a common yardstick for comparing the MPG of different cars

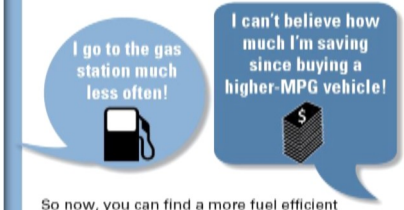
- Controlled and repeatable
- Correlated with real-world driving data
- Reviewed and updated regularly

Will I always get the label values?

No, your mileage may vary based on how you drive and the road and weather conditions...



...but, however you drive, EPA's fuel economy estimates ensure that you can compare MPG in an apples-to-apples way.



So now, you can find a more fuel efficient vehicle and save money at the pump!

Look for the label when you shop, and visit **fueleconomy.gov** for more information.

#9 SMOG Rating

This is a rating for vehicle tailpipe emissions of those pollutants that cause smog and other local air pollution.
For those vehicles that run on electricity, the tailpipe emissions are zero.
